DETECTING METHOD FOR SEMICONDUCTOR LASER (54) ABNORMALITY DEVICE

(57) Abstract:

PURPOSE: To simply determine and as the condition for giving a decision specified in the specification for the set the reference voltage, to be used method wherein a bias current and (LD), based on the characteristics for a semiconductor baser diode semiconductor laser diode by a

determined as abnormal are the reference voltage to be compared with each other.

58140175 A

with which the output voltage EX and converted, 1 to voltage and a CMP23 CONSTITUTION: The photo output bias current to be supplied to the LD which the LD1 will be determined as the reference voltage 22 that was set detection of abnormality of the LD1 based on the result wherether or not s conducted based on the results of voltage 22 and the CMP23, in other stabilized circuit 6, with which the the actual bias current has become so as to stabilize said photo output based on the bias current value at abnormality of LD1 is performed said comparison of the reference larger than the bias current to be abnormal, is provided and the will be variably controlled, is provided. The bias current is of the LD1 is detected and a words, the detection of the determined as abnormal.
